

I vividly remember the joy I got from using the computer for the very first time. Ever since that day, I have been hooked.

An education in computer science was something I dreamed of from a young age. To be able to study a course that not only interested me, but I genuinely enjoyed was all I wanted. Because of this drive, I chose to study Mathematics and Computer at Federal University of Technology, Minna after my high school.

Outside of my lectures, I participated in workshops to learn HTML, CSS. It was this workshop that gave me insights to application development.

During my industrial training, I did a six months course with Emerging Trees Limited, where I learnt about other operating systems like Linux. Here, I did a training in Structure Query Language (SQL) and Database Management Systems. I later wrote and passed my certification exams in Oracle 10g.

After my graduation from University, I started to learn PHP through Youtube videos from where I started learning frameworks like Laravel.

While I was doing personal researches, I found Javascript as a necessary tool for frontend development and started to develop interests in it.

It was with a combination of my knowledge of HTML, CSS, Javascript, SQL and PHP that I developed a website for a client who then referred me for an interview at Federal Medical Centre, Keffi.

I got employed at Federal Medical Centre, Keffi on 6th December, 2011.

My first schedule was developing, managing and administration of the hospital website.

The needs of the website grew to creating a job application portal for aspiring job seekers. This came with a lot of challenge, from which I got a lot of experience.

I decided to learn a javascript framework (Reactjs) together with MongoDB, Express, Node from which I developed applications like an Instagram Clone and couple of other web applications.

I extended my knowledge to mobile application development with React Native from which I developed a mobile application for my organization (fmckeffiapp) which is downloadable on the Google Playstore.

After other extensive researches, I decided it was time to go for further studies in Cyber Security in a reputable University.
